

NEW DESIGN!

S-CUT[®]

RTL-501 & RTS-701

17-001RF

Manufactured
in Sweden by
ES Equipment AB

High quality products for rescue

NEW FUNCTION *makes it easier than ever to turn the cutting blade!*

Our premium products **S-CUT RTL-501** and **RTS-701**, are improved versions of the old 501 and 701. They are optimal tools when it comes to rapid rescue measures. Compared with scissors and knives, the **S-CUT** considerably shorten the time for cutting clothes in rescue situations, cardiac arrests, chemical accidents and hypothermia.

S-CUT is safe to use. Despite the extreme cutting ability the risk of cut injuries is almost non existent, neither of patient nor rescue staff.

The **RTL** and **RTS** models are intended for rescue teams and therefor produced with premium quality. Ambulance-, rescue

teams and military units all over the world are using them and more and more organisations discover that **S-CUT** is unbeatable.

S-CUT has also found a place within police, correctional- and decontamination personnel.

S-CUT RTL-501

Quick, simple and safe – A tool you can trust every time

The simple and ingenious design allows you to trust it every time

Voices from S-CUT users

Of all tools we have tested in accidents and traumas, **S-CUT** have time after time proved that it is the best. For example, we save up to five minutes to get the leather suit of a motorcyclist.

Sari Sirilää, Nurse/ATLS coordinator, Sahlgrenska University Hospital Göteborg

S-CUT is an important part of the equipment I use to take care of injured soldiers. I have used it for years and find it totally reliable. **S-CUT's** ability to cut through the soldiers equipment, including the body armor, is unique.
